

Lucifer is Satan

This is an answer to the following question in the e-groups:

I been doing research about the Gods Satan is linked to. I decided to look more into the Roman God Lucifer. I saw a few Satanists say that Lucifer is a Sun God but I didn't find much info backing that up. Is this true?

In the East, Sanat (an anagram of Satan) is called Shurka, the name of Venus. He came from Venus to liberate Earth with his allies of 144,000 souls. This is the Kundalini serpent that transforms the material elements of the being, the earth, to the gold of spirit, and opens the 144,000 nadis. Venus is shown as a hermaphrodite because of the serpent and the united soul. This is the spiritual sun. The eight-pointed star of Venus connects to the solar plexus and shows the map of the whole soul.

The head God the Satanic Templars worshiped was Venus. The Baphomet, as we see, gets the symbol of Venus, the pentagram, the symbol of the union. The male is the pentacle. Turning it upside down makes the union of male and female, the spirit and body.

Osiris and Ptah are the same God in Egypt, and Osiris was called Lucifer as well. There is this bizarre misinfo around that Satan and Lucifer are different. This is false. They are the same underlying mythological allegory, but not the same being. You can see that Satan is literally called Lucifer in the east and west, as mentioned in the ancient Pagan tradition.
